134. Gas Station

This is a greedy problem

I have no clue how to solve it

Leetcode solution

gas = [1, 2, 7, 4, 5]

cost = [3, 4, 5, 1, 2]

but for this to work

sum(gas) ≥ sum(cost)

diff = [-2, -2, -2, 3, 3]

res = -2, 0, -2, 0, -2, 0, 3, 6 ← we reached end

check if < 0

then we can start here if < , then set to 0
